### REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance:
2. Claim 15 is considered to be in condition for allowance, particularly due to the limitations of the last two sections of the claim, wherein the at least one controller checks that all permission messages associated with requests that preceded the request associated with the current permission message have been received so that it can then issue an update message to the resource node (the resource node can then change the state of the target resource to the free state). The rest of the limitations of the claim deal with a network of resource nodes and control nodes, wherein the control nodes issue requests to access resources held with in the resource nodes, said resources being maintained in a locked or free state. Such a system of resource locking and access exists in the prior art, particularly in U.S. Patent No. 4,435,766, U.S. Patent No. 5,551,046, U.S. Patent No. 5,673,399, U.S. Patent No. 5,694,556, U.S. Patent No. 6,138,192, U.S. Patent No. 6,182,186, U.S. Patent No. 6,353,869, U.S. Patent No. 7,174,406, and U.S. Patent No. 7,380,247. However prior art teaching that a controller waits until all previous requests have been granted before a target resource is released has not been found to exist. Therefore, the limitations discussed above when taken in consideration with the rest of the claim in its entirety distinguish the invention from the prior art.

3. Claims 16-21 are considered to be in condition for allowance based on their dependence on Claim 15.

4. Claim 22 is considered to be in condition for allowance, particularly due to the limitations of the last two sections of the claim, wherein the at least one controller checks that all permission messages associated with requests that preceded the request associated with the current permission message have been received so that it can then issue an update message to the resource node (the resource node can then change the state of the target resource to the free state). The rest of the limitations of the claim deal with a network of resource nodes and control nodes, wherein the control nodes issue requests to access resources held within the resource nodes, said resources being maintained in a locked or free state. Such a method of resource locking and access exists in the prior art, particularly in U.S. Patent No. 4,435,766, U.S. Patent No. 5,551,046, U.S. Patent No. 5,673,399, U.S. Patent No. 5,694,556, U.S. Patent No. 6,138,192, U.S. Patent No. 6,182,186, U.S. Patent No. 6,353,869, U.S. Patent No. 7,174,406, and U.S. Patent No. 7,380,247. However prior art teaching that a controller waits until all previous requests have been granted before a target resource is released has not been found to exist. Therefore, the limitations discussed above when taken in consideration with the rest of the claim in its entirety distinguish the invention from the prior art.

5. Claims 23-26 are considered to be in condition for allowance based on their dependence on Claim 22.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
